Re: Doc. 99N1038

Dear FDA:

I am sending you this to express my passionate beliefs about the direction the FDA is heading.. Your services should help us become informed about what contaminants food may contain, ensuring the safety of our food. **When food is irradiated, the public needs to be informed.** My family, friends and I want to eat high quality food and need to know that the enzymes and vitamins are not destroyed.

While I'm at it...I do not want the FDA restricting the information the public gets about vitamins & supplements (even herbs). Labels are great identifiers and are necessary. We need information, for us as consumers, to make the healthiest choice for ourselves. That's key in managing my own health and that of my family.

I hope that you will become more open to natural remedies and will continue to serve the best interest of the public.

Thank you!

Sincerely,

Marsha M. Campbell
